PINEAPPLE

Background.

Pineapple production in Costa Rica was determined by the country's political stability, climatic and geographic conditions and the quality of the local workforce.

Twenty years after the decade of the 90s, thanks to the analyzes in Biotechnology, circumstances of supply and demand. The variety of pineapple MD2 or Golden Pineapple created a new era for the export sector of Costa Rica.

Fresh del Monte through its subsidiary PINDECO was the pioneer in selling pineapple abroad. The level of quality reached in the controls, together with the predominant agricultural infrastructure, due to the boom in banana cultivation, they made it possible to distribute this fruit in the North American and European markets.

Today, Costa Rica is the largest pineapple exporter in the world.

Pineapple Properties.

Minerals: potassium, iodine.
Vitamins: A, B and C.

Recommended in the treatment of conditions such as:

- Fluid retention (acts as a diuretic)
- Problems of intestinal transit and constipation (due to its great laxative power)
- Hypertension, cholesterol and anemia
- Poisoning (works as a scrubber)
- Disorders of the immune system (reinforces the decrease in defenses and helps the formation of red and white blood cells)
- Degenerative and cardiovascular problems
- Poor blood circulation
- Obesity
- Problems in bone growth, tissues and nervous system in children.
